

Agri Analysis, Inc.

MANURE NUTRIENT MANAGEMENT AND ITS IMPORTANCE

Approximately three-fourths of the nutrients harvested in crops grown on a farm, in the purchased feed and supplements fed to the livestock may be recycled back to crop fields in the form of manure. Thus, manure nutrient management always has been and continues to be an important economic consideration on farms with livestock or poultry. **Manure, when used as a fertilizer supplement, has tremendous economic value as illustrated in the following chart.**

Please visit our web-site: www.agrianalysis.com for additional information and graphs.

Agri Analysis, Inc. recommends the following strategy:

- 1) If a farmer has not had his manure tested, make arrangements to have it tested at Agri Analysis, Inc.
- 2) A representative manure sample should be tested at least one time per year.
- 3) The sample test report should be interpreted by a professional.

Agri Analysis, Inc. recommends our **MP4 test for dairy manure** and the **MP7 test for poultry manure**. These tests will insure that all issues have been addressed. The issues addressed will assist in making decisions for proper field application. Please consult our website for additional manure test packages.

Agri Analysis, Inc. receives testimony after testimony from professionals as well as farmers, stating **“Why did I wait so long to have my manure tested?”**
